

Environmental policy

With reference to our corporate Environmental Policy, our company top management commits to focus on the following targets :

- increasing the efficiency and efficacy of the internal processes having a significant environmental impact.
- complying with the current regulations and laws concerning the environment and the related issues.
- complying with any other environmental regulations and resolution they may have underwritten.
- periodically checking the company environmental performance.
- deploy, as long as it may be financially feasible, the best technologies currently available on the market, to prevent pollution and preserve the environment.
- reducing the consumption of energy and natural resources by adopting responsible behaviours as detailed in the dedicated documentation.
- reducing the most significant negative effects on the environment associated to new activities and/or services, by enforcing the procedures and plans foreseen by the Management System.
- spreading awareness among their customers with the aim to push them to sort wastes.
- recovering wastes instead of disposing of them otherwise.

With the view to achieve the corporate targets above, the Management shall encourage and promote any possible initiative and inputs regarding such subjects coming both from outside the Company (from Customers, Supervisory Bodies, Waste Treatment Plants etc.) and inside (from the Company staff). The Management is actually well aware of the fact that involving all their staff is crucial for achieving the environmental targets above, since employees are responsible for the correct implementation of the Corporate Environmental System and for monitoring the whole production process.
