NOVAMIDE PA6 GF30 H2

**PA6 compound,
Glass fiber reinforced grade**

GF30: 30% glass fiber reinforced

H2: enhanced heat aging stabilization grade.

Color: available in a limited range of colors, for injection molding of high stiffness and high dimensional stability technical parts (industrial articles, electrical and automotive parts).

RECOMMENDED PROCESSING PARAMETERS FOR INJECTION MOLDING

DRYING CONDITIONS (dry air dryer)	BARREL TEMPERATURE	MOULD TEMPERATURE
Drying time is depending on moisture content, in general 2 ÷ 6 h at 80°C is sufficient. Recommended moisture levels after drying: 0.02 ÷ 0.05%	270 ÷ 290 °C	80 ÷ 120 °C

SHRINKAGE: Shrinkage is affected by the geometry and the wall thickness of the molded part by the position and size of the gate and by the processing parameters (melt and mold temperature, holding pressure and holding pressure time together with the storage time and storage temperature). The interaction of these various factors makes it difficult to predict the shrinkage of a part exactly. In addition glass-fiber reinforced products show a significant difference in the shrinkage perpendicular and parallel to the flow direction. It must be considered the post-shrinkage component too, giving rise to a dimensional change over the time.
